

What is claimed is:

1. A lounge chair comprising:

A generally horizontal body support assembly for supporting a user thereon in a prone position;

a leg assembly for holding said support assembly above the ground or the like, said support assembly including an opening for receiving the breasts of a female user there-through; and

a pocket attached to and depending from a lower side of said support assembly beneath said opening for accommodating and obscuring the female user's breasts.

2. The chair of claim 1 in which said pocket is large enough to provide clearance between the female user's breasts and a bottom of said pocket so that the breasts do not directly engage the bottom of said pocket and, instead, hang substantially loosely within said pocket without pressure being exerted by said pocket against the breasts.

3. The chair of claim 1 in which said pocket is large enough for loosely accommodating a user's accessories therein, even when a female user is lying prone on said support assembly with the user's breasts accommodated in said pocket.

4. The chair of claim 1 in which said support surface further includes an aperture positioned on said support assembly for accommodating the user's eyes and at least a substantial portion of the user's face, including the nose and mouth.

5. The chair of claim 4 in which said aperture has an oval configuration.

6. The chair of claim 4 in which said aperture has a T-shaped configuration.

7. The chair of claim 4 further including a reading material holder that is attached to and depends from a bottom surface of said support assembly below said aperture for supporting reading material thereon such that the material may be read through said aperture by a user whose face is engaged with said aperture.

8. The chair of claim 7 in which said holder includes a flexibly foldable rack attached at opposing ends thereof to the lower surface of said support assembly.

9. The chair of claim 1 in which said support assembly includes multiple, foldably interconnected segments.

10. The chair of claim 9 in which a support assembly includes an intermediate support segment and upper and lower support segments foldably joined to the intermediate support segment for supporting the head and legs of the user, respectively.

11. The chair of claim 9 in which said breast accommodating opening is formed in said upper support segment.

12. The chair of claim 9 in which said pocket is composed of a thin flexible material that is collapsible into a generally flat condition at least when said support assembly is folded.

13. The chair of claim 1 in which said pocket is composed of opaque material.

14. The chair of claim 7 in which said holder includes an elongate strap and at least one open side for inserting reading material into said holder and allowing the reading material to be conveniently illuminated by ambient light.

15. A lounge chair comprising:

a generally horizontal body support assembly for supporting a user thereon in a prone position;

a leg assembly for holding said support assembly above the ground or the like, said support assembly including an aperture positioned thereon for accommodating the user's eyes and at least a substantial portion of the user's face, including the nose and mouth; and

a book holder that is attached to and depends from a bottom surface of said support assembly beneath said aperture for supporting an open book thereon such that the book may be read by a user whose face is engaged with said aperture.

16. The chair of claim 15 in which said holder includes a flexibly foldable rack attached at opposing ends thereof to the lower surface of said support assembly.

17. The chair of claim 15 in which said holder includes an elongate strap and at least one open side for inserting reading matter into said holder and allowing the reading matter to be conveniently illuminated by ambient light.

18. The chair of claim 15 in which said support assembly includes a pair of recessed edges formed on respective sides of said support assembly for accommodating a user's arms such that the user may conveniently manipulate the reading material within said holder.

19. A lounge chair comprising:

A generally horizontal body support assembly for supporting a user thereon in a prone position;

a leg assembly for holding said support assembly above the ground or the like; said support assembly including an opening for receiving the breasts of a female user therethrough and an aperture positioned on said support assembly for accommodating the user's eyes and at least a substantial portion of the user's face, including the nose and mouth;

a pocket attached to and depending from a lower side of said support assembly beneath said opening for accommodating and obscuring the female user's breasts; and

a reading material holder that is attached to and depends from the bottom surface of said support assembly below said aperture for supporting reading material such that the material may be read by a user whose face is engaged with said aperture.
